

Can you help us find
more sustainable
ways to build?

Mechanical Maintenance Engineer (Outsourced)

As a member of Holcim Group, the world's global leader in innovative and sustainable building materials, Lafarge Egypt is reinventing the way the world builds. Supported by a strong team spread all over Egypt to shaping a greener, smarter and healthier world.

As we continue to look for more sustainable ways to build, we need world-class talent to join our team. People who are **passionate** about sustainability, driven by **curiosity** and keen to **grow**, **learn**, **develop** and **thrive** in our high-performance culture.

The opportunity at a glance

Leading a mechanical maintenance execution team in the coal mill, belt conveyors and de-dusting filters in the cement mills to ensure the highest possible efficiency and reliability, preparing the execution plans in parallel with managing the troubleshooting activities in both emergency/repair cases and follow it up with the inspection and planning teams both long and short term overhauls.

Maintain maintenance KPIs within the targets and secure technical qualification for the mechanical repair and modifications to improve equipment performance and control mechanical cost within budget.

Your responsibilities

- Implement Lafarge Safety Standards and Integrate safety into all maintenance operations and ensure working conditions and safety at work (Lafarge employees and contractors).
- Implement Maintenance plans, policies and procedures in the area in line with production strategy in order to ensure effective maintenance and engineering support of the production.
- Propose improvements for coal and cement grinding area under the direction of the department manager to ensure that the highest standards of maintenance and engineering services are achieved and maintained.
- Actively contribute to the overall production planning process through the provision of technical and process maintenance and engineering expertise to ensure that the production plant is optimally utilized.
- Utilize technical expertise to assess new technology and recommend its implementation as appropriate in order to support the achievement of continuous production operation at minimum maintenance cost.
- Provide professional advice and guidance to internal customers on maintenance and engineering issues in order to support the achievement of production objectives.

- Being a part of Preparing and managing the annual budgets and operating plans that accurately represent anticipated operation and development costs and so allow accurate business planning and cost management.
- Lead and promote technical development in plant, equipment and process maintenance in order to ensure continuous development and improvement of the maintenance operation.
- Identify, understand and control, as far as possible, factors affecting deviation from planned maintenance operations in order to support the achievement of effective optimal cost, proactive maintenance with minimal production downtime.
- Control mechanical activities execution to be matched with plant safety rules and coaching mechanical team member in order to be safety results with zero incidents.
- Manage mechanical activities to achieve the targeted MTBF.
- Ensure controlling dust emission to reduce the plant pollution and to align with environmental compliance.
- Identify, develop, propose improvements for the department under the direction of the Department Manager, in order to ensure the highest standards of maintenance and engineering services are achieved and maintained.

Your experience

Education:

- Bachelor of Mechanical Engineering

Technical Skills:

- Experience in Mechanical execution and planning.

Experience:

- 3-5 years in mechanical maintenance preferably in the cement industry

Our offer

While you help us deliver world-class construction solutions, we promise to help you grow in a dynamic working environment that offers attractive working conditions and encourages personal and professional development.
